

VASCOR provides operational excellence at every turn in your logistics journey.

With talented can-do employees, global resources and leading-edge IT systems, we have the strength to earn your confidence as your preferred 3PL logistics provider.

Your comprehensive automotive logistics provider

Information Technology Suite: Our robust Information Technology (IT) tools help customers and transportation providers partner with us to translate vast quantities of data into actionable intelligence. With tight user-defined controls, the infrastructure provides multiple layers of network security. And because the technology is Microsoft-based, our foundation is both advanced and fully compatible with multiple platforms. World-class tech support is available whenever needed. Using this technology as a starting point, we built our system from the ground up, so it anticipates and responds to the automotive logistics industry's unique demands and characteristics. Some of the system's most advanced functionality includes:

- Advanced, comprehensive order management capability integrated with Oracle's Transportation Management system.
- Feature-rich Logistics Information Management System (LIMS) to help

customers keep up with parts orders. In the process it facilitates better planning, resource allocation and operations management.

- Automatic and customizable alerts to track movement of finished vehicles, in-process claims and other critical processes.
- Secure cross-functional interconnectivity loops in our customers' internal systems, automotive OEMs and major railroads and trucking companies for optimal data exchange.

The result: smoother operations, stronger productivity, increased profitability and improved ROI.

Industry-specific expertise. At the speed of thought.

How can VASCOR help your company operate more efficiently and squeeze greater ROI out of operations? We invite you to contact us today for answers.

Full-spectrum logistics services for the automotive industry

VASCOR provides unmatched depth in logistics and supporting services that are tightly focused on the automotive business. No wonder OEMs, trucking companies, Tier One suppliers and Class I railroads trust us to handle such a wide range of logistical challenges. Our service lineup includes:

- Inbound parts logistics
- Finished vehicle logistics
- Claims management
- Information technology services
- Supply chain engineering
- Transportation management
- Value added services
- Inspection services
- Yard management
- Plant releasing operations
- Data analysis

VASCOR

ISO 9001 Certified

VASCOR. Uniquely positioned to help you meet the automotive industry's unique challenges.

Getting finished vehicles and parts from where they are to where they need to be. It's a hugely complex undertaking—almost like a ballet, requiring skill, coordination and a mastery of details. It's also the reason VASCOR (Value Added Service CORporation) was created in 1987. Not as a division of a larger company but as the sole focus of our energy and resources.

Today, VASCOR provides a full range of advanced logistical services to customers throughout the automotive industry: OEMs, Tier One suppliers, trucking companies and Class I railroads.

About VASCOR

Based in Georgetown, KY, VASCOR, Ltd., is a joint venture between APL Logistics, a division of Neptune Orient Lines, and FUJITRANS of Japan.

Mission: To provide value-added supply chain services to the automotive industry. We do this with quality employees, leading edge technology, and tenacious customer focus.

Structure: Like the supply chains and logistical solutions we engineer, VASCOR is designed for optimal efficiency.

Our logistics services include end-to-end design and management of complex supply chains as well as comprehensive finished vehicle solutions. A robust support services division helps us perform consistently and seamlessly for customers. Support services include engineering, claims processing and analysis, and a robust information technology suite.

Logistics Services: Rubber, meet road.

We provide custom crafted end-to-end solutions that address the challenge of moving assembly parts and service parts from origin to destination. Along the way, our customers get more than the right products delivered to the right place at the right time. They also gain significant operational economies and efficiencies—plus actionable data and insights into continuing process improvements.

Among our key logistics services:

- Supply Chain Management
- Transportation Management
- Value Added Services
- Ancillary Logistical Services

Finished Vehicle Services: Excellence at every turn.

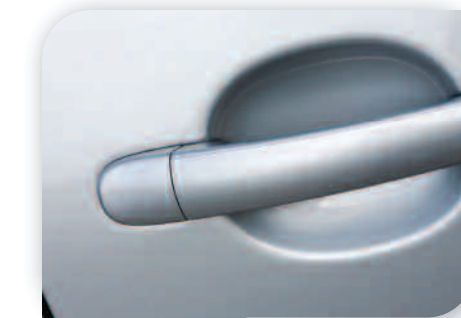

At the same time, we provide a blend of Finished Vehicle logistics that have become the industry's quality benchmark, making VASCOR the recognized go-to source for customized services in this important arena. Among the component services under our Finished Vehicle Solutions umbrella:

- Data analysis
- Driveaway delivery
- In-transit repair management
- Inspections
- Major damage evaluation
- Mixing yard operations
- Plant releasing
- Protective coating application
- Strategic vehicle storage
- Vehicle accessorizing
- Vehicle marshalling
- Vehicle transportation

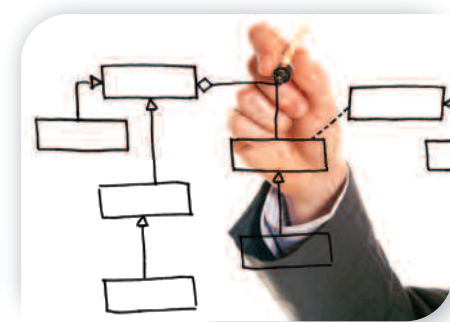

Support services: Excellence behind the scenes

Standing solidly behind our front-line logistics and finished vehicle solutions, a small army of professionals work diligently to harness the resources needed to create, implement and manage VASCOR's world-class logistics.

Claims: Our automated claims management system helps customers save millions in wrongly attributed damage claims. By determining the root causes of vehicle damage, we help customers correctly assign responsibility and expedite claim presentation and resolution. What's more, our claims analytics team can significantly improve quality and reduce losses by pinpointing red-flag issues in manufacturing and assembly processes.

Supply Chain Engineering: With cutting-edge technology and decades of expertise, our staff designs and implements optimized solutions for customers every day. We start with a systematic assessment of the existing chain, then plan strategies for new logistics solutions. The result: a well-rounded functional design that responds to the customer's unique needs and challenges. After assisting with implementation, our experts examine continuous feedback data to perform a detailed performance analysis for the new supply chain. This process generates impressive quality improvements and cost savings for customers.
